Motorkov turbo servis

<https://motorkov.com>

Description

Turbocharger service under its current name has been operating since 1980. From the founding of the 1980s, the 20th century to the present day, we primarily deal with internal combustion engine (SUS engines). Following the development of the automotive industry, we strive to keep up with new technological advances. Accordingly, our service is equipped with the latest devices and equipment, both for service and overhaul of turbochargers and all diagnostic devices for testing the accuracy of turbochargers. The service is equipped with all necessary measuring instruments to check and test turbocharger parts, test their components such as electronic, vacuum, throwers and combined actuators. Also by applying different diagnostic devices, the turbocharger is tested on the vehicle itself. Turbo service Motorkov is also a regular participant in all large watches and fairs dealing with the promotion of auto components and vehicle maintenance. We proudly emphasise our participation in the eminent review of this kind in Germany. Namely, in 2016, as the only company dealing with the overhaul of turbochargers from this area, we offered our services to customers from all over the world. As exhibitor at the "Automechanika" fair in Frankfurt in September 2016. In 2013, turbo service Motorkov made numerous contacts and made cooperation with companies from countries in the region.
